## Office Action Summary

**Application No.**

10/785,021

**Applicant(s)**

MATSUSHITA ET AL.

**Examiner**

Henry K Choe

**Art Unit**

2817

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 30 November 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 11-14 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 11-14 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liwinski (Fig. 1).

Regarding claim 11, Liwinski (Fig. 1) discloses an amplifier circuit comprising a first power transistor (Q2), a first capacitor (C1) having a first terminal (bottom terminal of C1) which is coupled to receive a high frequency input signal (RFin) to be amplified and a second terminal (upper terminal of C1) which is coupled to the input terminal (base terminal of Q2) of the first power transistor (Q2), and a bias circuit (BIAS CIRCUIT) which includes a first transistor (Q1) and a first circuit (Q3) and wherein the first transistor (Q1) being configured as to form a current mirror circuit with the first power transistor (Q2) and the first circuit (Q3) receiving a control signal (Vreg) and providing to the first transistor (Q1) a current signal (Icm) according to the control signal (Vreg). As described above, Liwinski (Fig. 1) discloses all the limitations in the claim 11 except for that the first power transistor being formed on a semiconductor chip.

It is well known to integrate the electronic circuits in the semiconductor chip in order to form of small sized Integrated Circuit (IC). Therefore, it would have been obvious to have integrated the first power transistor of Liwinski (Fig. 1) in the semiconductor chip because such a modification would have advantageously produced a small-sized integrated circuit.

Regarding claim 12, the first transistor (Q1) is a bipolar transistor which is configured as a diode with the input terminal (base terminal of Q1) of the first transistor (Q1) coupled to the first terminal (collector terminal of Q1) of the first transistor (Q1) and wherein the current signal (Icm) is provided to the first terminal (collector terminal of Q1) of the first transistor (Q1). As described above, Liwinski (Fig. 1) discloses all the limitations in the claim 12, except for that the first transistor (Q1) being a FET. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have substituted well known art-recognized equivalent transistors such as a FET in place of the bipolar transistor in the circuit of the Liwinski (Fig. 1) because such a modification would have been considered a mere substitution of art-recognized equivalent transistors.

Regarding claim 13, the input terminal (base terminal of Q2) of the first power transistor (Q2) is coupled to the input terminal (base terminal of Q1) of the first transistor (Q1).

Regarding claim 14, Liwinski (Fig. 1) discloses all the limitations in the claim 14, except for that the first power transistor (Q2) being a FET. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have substituted well known art-recognized equivalent transistors such as a FET in place of the bipolar transistor in the circuit of the Liwinski (Fig. 1) because such a modification would have been considered a mere substitution of art-recognized equivalent transistors.

***Response to Arguments***

Applicant's arguments with respect to claims 11-14 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Henry Choe whose telephone number is (571) 272-1760.
